SANGDONG KIM

Office Address

Department of Economics 410 Arps Hall 1945 N. High St. Columbus, OH 43210 Contact https://sangdongkim.com kim.7984@osu.edu Last updated: December 10, 2024

EDUCATION

PhD in Economics, The Ohio State University	2026 (expected)
M.A. in Economics, Seoul National University, South Korea	2020
B.A. in Economics, Seoul National University, South Korea	2018

RESEARCH INTERESTS

Macroeconomics (Macro-International, Macro-Labor)

The Optimal Fiscal Policy in Aging Economies (Job Market Paper)

Granular Search in Monopsonistic Labor Market with Sean McCrary

Abstract: We develop a model of labor market equilibrium with the granular search protocol, à la Jarosch, Nimczik and Sorkin(2024), where the firm size distribution is endogenously determined. We introduce a simple static model to show that the monopsonist's effective Nash bargaining power is endogenously determined by the firm's relative size. Monopsonistic firms choose the optimal vacancy postings taking into account the wage determination, ending up with overposting vacancies to suppress wages. We then extend the model to a dynamic model and solve its stationary equilibrium. The dynamic model delivers a rich set of policy implications, including the effect of minimum wage policy on the wage distribution and the effect of competition policy on the labor market equilibrium. Specifically, we show that the increase in wages upon the entry of a new firm is more amplified in the presence of granular search protocol since the new firm's entry reduces the incumbent firm's effective bargaining power as well as their employment size.

Sovereign Partial Default in Continuous Time with Gabriel Mihalache

Abstract: We formulate and solve a tractable, continuous time version of the sovereign *partial default* model of Arellano, Mateos-Planas and Ríos-Rull (2023). We compute our model using both traditional continuous time methods and, with an eye towards larger state space applications, on a deep neural network. We show that our formulation allows for a tight characterization of debt and default dynamics, as well as the length and severity of crisis events.

Strategic Demand for Inventors

*Abstract:*This paper develops a simple Schumpeterian growth model where firm-level strategic demand for inventors can be described. All firms should produce the latest invention to be the monopolist in output market, and inventor is the only input of innovation. In the model, innovating firms can determine their demands for inventors to strategically deter their competitors' innovation. Using a tractable model with Stackelberg competition in inventor market, I study the effect frontier firm's strategic demands on the aggregate growth. Compared to the non-strategic model, frontier firms' strategic hiring decisions can worse off the aggregate growth and the top income inequality. The mechanism is intensified when fixed cost of R&D is high. *Presented at: Midwest Macro Spring 2023 (Clemson)*
